

HS reel liners for continuous digital printers

Improve productivity and efficiency and make your workplace safer.

Our reel liners work on all makes and models of unwinds and rewinds. Using part used reels for this purpose can lead to slack tension and an expensive scrapped roll of paper!

Excellent reel quality

Our reel liners straight and tight; no dished or 'sombbrero' reels. They are light weight (only 4kgs). The reel liners are flexible and durable, do not bend or buckle and withstand abuse and rough treatment, unlike metal based types.

Main benefits

Reducing down time and waste

- Prevents annoying 'wrecks' and miss feeds when feeding inserter / finishing equipment.
- Prevents 'memory curled' stationery.
- Saves paper by using up 98% of your reel stationery.
- No 'nearly used up reels' littering your print/mail area.

Reducing health and safety risks

- Reduce back injury – no lifting of 'over weight' part reels to rewind on.
- Easy and convenient to store when not in use, helping to preserve a clean and tidy print and mail area.

Specification

Material and construction

Polypropylene (6mm), fully welded.

Howard Solutions

Delivering handling equipment to web fed printing and high volume manufacturing industries
